Anti-Graffiti Coating

Our anti-graffiti coating is a hydrophobic pore lining impregnator.

It works by modifying the surface properties of the pores within the concrete and the external surface. Post curing it reduces the surface tension of the concrete until it reaches a value less than any liquid or substance that may be present on its surface.

This is important because the product develops the ability to repel water, salts, oil, diesel, graffiti, gum and dirt. The structure becomes virtually self-cleaning. At the same time, water-vapour is able to permeate through the treated surface, keeping it breathable and thus avoiding water related problems.

The key properties of the coating include:

- Efficient for more than 15 years
- Usable on vertical and horizontal concrete surfaces; inside or outside
- Non-hazardous and non-toxic
- Invisible when dry
- Spray applied
- Water and oil repellent
- Protects concrete substrates against water, oil, dirt and graffiti.

The product gives total protection for concrete.

Important note: Although this product has been tested it may be that certain types of graffiti marker / paint / chemicals may penetrate/ damage the surface, thus making full removal not possible.
